

GitHub Instructions

1. Do not use hyphens or spaces in file names.
2. You may edit any file in your Codespace or repository.
3. If I modify a file in the class repository, I will create a new file named `oldName_update.py`.
4. If you already made changes to `oldName.py`, copy them into `oldName_update.py` and delete `oldName.py`.
5. To delete a file, right click on the file name, a paste popup comes up, right click on the paste popup, a context menu comes up, you may delete from there
6. Ungraded exercises will be placed in the 'exercise' folder within the class folder they are due. After review, solutions will be added to the folder.
7. ALWAYS run your programs in the terminal. The terminal should be in your root directory

`/workspaces/python3-userName`

8. Start a fresh bash shell and make sure `venv` is activated
